

Level up your efficiency with intelligent, high-speed document viewing

Modern organizations maintain many different business systems and applications which contain countless different file types. Opening each of these files often requires a dedicated application. ARender removes this headache by providing an intelligent, web-based solution to instantly stream over 300 types of content.

Driving efficiency, productivity, and collaboration, ARender document viewer allows users to securely view and collaborate on any type of content while optimizing IT bandwidth and download consumption by streaming the content from their existing business system.

Increase Process Efficiency

ARender's high-speed document viewer technology provides centralized access to files stored in multiple business and ECM systems. Using streaming technology, ARender significantly reduces the time spent opening documents, and helps organizations save millions of dollars a year in IT operations.

Enhance User Performance and Productivity

ARender provides lightning-fast access to files stored in ECM systems using innovative streaming technology — significantly reducing the time spent opening even the largest documents. Once the document is open, users can securely view, annotate, and share any type of file format from any system.

Streamline IT Costs

ARender's uses streaming technology to display any size file in milliseconds, using a fraction of the bandwidth and data download compared to traditional viewers. The solution only needs a web browser, reducing hardware requirements, eliminating the need for costly desktop software, and significantly dropping overall IT costs.

Achieve Business Agility

Organizations can increase profitability and maximize their ECM investments by standardizing access to information stored in their different business systems. ARender provides a single view on all business and ECM systems — eliminating document access barriers, allowing simple, secure sharing of information, and enabling fast internal and external collaboration.

High-speed content display

Display documents in less than 250 milliseconds from any device

Intelligent Streaming

Documents are streamed as images — no need to download content or open documents in their native application.

Centralized ECM

Connect with numerous ECM and CRM solutions to stream any type of files from a single interface

Performance Monitoring

Conduct performance monitoring on metrics like traffic volume, latency and data loss for all of your business applications
