

Extend Your FileNet Investment with Collaboration, Speed and Mobile-Access

View Any File Type Instantly

Business content is built to be viewed, shared, commented on, and changed. ARender allows users to access all of their FileNet content quickly and easily from any web browser.

Mobile Access to All Content

ARender allows you to view and work on over 300 file types including PDF, TIFF, MS Office and even engineering drawings - all without needing any software applications installed on your mobile or desktop.

Enhanced Collaboration

Modern business requires more than just access to information - users need to edit, share and comment on content securely and easily. ARender offers simple but powerful tools to enable this including comments, sticky notes, timestamps, signatures and more - all for documents AND images and videos.

No Waiting for Downloads

ARender streams content directly to your device, allowing you to work with large files even on poor internet connections or mobile devices with limited memory and storage. And documents are with you in milliseconds - ready to work on.

— “

*"Simple to deploy and easy to use,
fast renditions of complex documents,
and the ability to compare documents
- all of which save our users valuable
time"*

Michael Smyth,
Transperfect Lifesciences
