

# Powering Modern Engineering Projects

The review process for documents and drawings on complex engineering projects requires input from knowledge workers, managers, engineers, designers, and even regulatory offices.

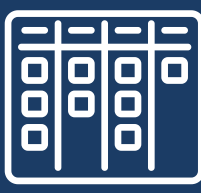

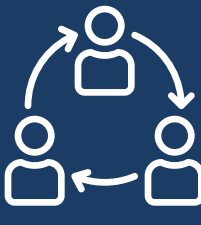

However, providing easy to use viewing, commenting and approval tools across these different stakeholders is not always easy.

## THE CHALLENGES

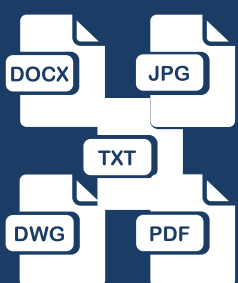

- 1** Co-ordinating multiple reviewers across multiple organizations with different devices and software applications   
Engineers
- 2** Ensuring consistent, secure, and auditable project review processes   
Designers
- 3** Maintaining compliance with all relevant safety, timescale, and regulatory constraints.   
Managers   
Regulators

## THE PAIN POINTS

-  Access to technical content needs to be secure which often requires expensive software licenses for each required user, even those who only need brief periods of access.
-  Latest versions of project plans and drawings must be available at all times.
-  Collaboration on these documents needs to include all relevant stakeholders - and needs to be simple enough to not require dedicated training.

## THE SOLUTION

### ENGINEERING COLLABORATION WITH

**Securely view all of your engineering content**

**With simple, intuitive, powerful collaboration**

**On any desktop, mobile or tablet device**

**Without consuming costly per-user software licences**

**LIBERATE YOUR ENGINEERING PROJECTS WITH ARENDER**

**Learn more at [www.ARrender.io](http://www.ARrender.io)**
